

NEW HEALTH ANALYTICS

Section 1

Introduction to PCA Plus V2

Product Features, ICD-10 Transition, Help & Support

Welcome to PCA Plus!

The new and improved Patient Care Analyst (PCA) Plus user interface was built to enhance your data mining experience!

The software platform draws from claims data to provide code analysis, demographic inquiry, and investigation of the competitive market. PCA Plus includes MS- and APR-DRG breakdowns, detailed clinical codes, charges and payer breakdowns, and includes both the ICD-9 and ICD-10 code sets.

PCA Plus can be used for:

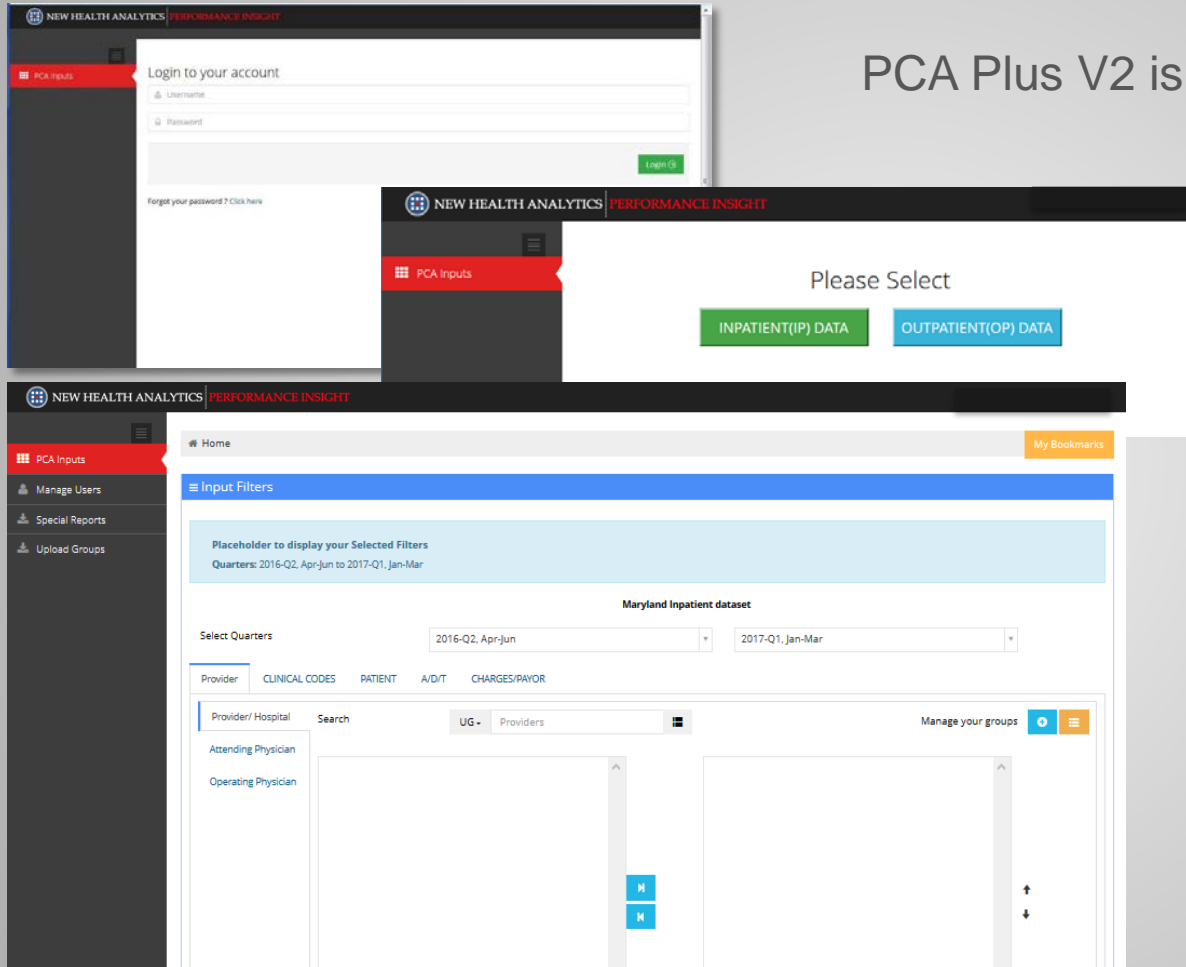

healthcare planning

strategic management

market & competitive analysis

improving service line productivity

Welcome to PCA Plus!

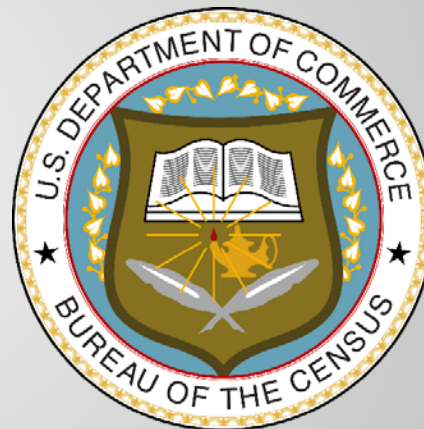

PCA Plus V2 is a contemporary, dynamic interface that offers:

- auto-fill text input fields
- one-window viewing
- new design layout options for quick and easy comparison
- improved bookmarking and grouping features

The sections of this PCA Plus Manual will guide you, step-by-step, through the new interface and the features our new software has to offer. Enjoy!

Data Available

Currently, the PCA Plus platform sits on 20+ quarters of data from the Maryland Health Services Cost Review Commission (HSCRC) & demographic data the U.S. Census Bureau. It contains Q1-2009 through the most recent quarter of data released by MD HSCRC.

As health systems are working to integrate services across the spectrum of health care, NHA is working towards the goal of aggregating data from these various sources to provide our customers with a wide breadth of data to support decision making within the organization.

Making the Move to ICD-10

The compliance date for ICD-10-CM/PCS was October 1, 2015. For dates of service or discharge that occur after that date, ICD-10 codes and guidelines replace ICD-9-CM diagnosis codes.

The following slides will highlight changes that healthcare providers will need to be aware of to be successful in the transition.

Note: ICD-10 will not impact how you report CPT and HCPCS codes, including the modifiers for physician services.

Why the switch?

The ICD-10 classification system is an expanded code set that will provide more specificity and clinical information, resulting in better data for:

- Measuring care furnished to patients
- Designing payment systems
- Processing claims
- Making clinical decisions
- Tracking public health
- Identifying fraud and abuse
- Conducting research

**ICD-9-CM
Angioplasty
1 code (39.50)**

**ICD-10-PCS
Angioplasty codes
854 codes**

Specifying body part, approach, & device, such as:
047K04Z – Dilation of right femoral artery with drug-eluting intraluminal device, open approach
047K0DZ – Dilation of right femoral artery with intraluminal device, open approach
047K0ZZ – Dilation of right femoral artery, open approach
047K34Z – Dilation of right femoral artery with drug-eluting intraluminal device, percutaneous approach

Structural Differences

The ICD-10 classification system consists of two parts:

1. ICD-10-CM –developed by the CDC for use in all US health care treatment settings. This system uses 3-7 alpha and numeric digits and full code titles, but the format is very similar to ICD-9-CM.
2. ICD-10-PCS – the procedure classification system developed by CMS for use in inpatient hospital settings only. The new coding system uses 7 alpha or numeric digits while the ICD-9-CM coding system uses 3 or 4.
